

Is your real intelligence hidden in multiple reports across the organization? Are you ready to transform this hidden data into valuable insights that will enable your workforce to make critical business decisions? Consider Xtivia's Business Intelligence (BI) & DataWarehousing (DW) JumpStart with SQL Server program to create an intelligence infrastructure that delivers integrated, real-time data at a low cost.

A carefully crafted program, BI & DW JumpStart with SQL Server program is designed to help you:

- **Leverage familiar tools:** Use and deliver rich data through familiar tools, enabling easier adoption of business intelligence throughout the organization.
- **Drive business performance:** Easily create and distribute flexible, customized, multidimensional reports and scorecards to enable decision making and improve business performance.
- **Collaborate:** Simplify collaboration by effectively sharing information.
- **Manage Infrastructure:** Deploy BI on a proven, scalable, integrated, and easy to manage platform (SQL Server 2005) using Xtivia's industry leading capabilities.
- **Keep implementation costs low:** Achieve your goals at a reasonable price using Xtivia's services and Microsoft's SQL Server platform instead of utilizing your budget on purchasing different product suites for BI, DW and analytical tools.

A Complete Solution

If you are thinking about implementing a long lasting solution around business intelligence within your organization, Xtivia's BI & DW JumpStart with SQL Server program will:

- Leverage Microsoft Office tools for analysis that you and your organization already use.
- Add benefits for forecasting, demand planning, market trend analysis, customer profiling and scoring, micro-marketing, cross-selling, balanced scorecards, etc.
- Create customized views and rich visualizations that communicate information graphically, making it easier to develop knowledge and deep contextual insight.
- Integrate and analyze data from multiple sources.
- Develop more extensive and complex analytical models.
- Create infrastructure to build reports, both traditional and interactive, and distribute them as narrowly or as widely as you choose throughout your business.

Launch business intelligence and grow it into the future with Xtivia's BI & DW JumpStart with SQL Server program.

What We Do

Assess your BI Readiness, create a BI & DW solution blueprint using SQL Server technology, and implement the solution with on-going support using VDBA services

What You Get

A complete and accurate assessment of your readiness, the design and architecture that meets your needs, and comprehensive BI & DW implementation services using SQL Server technology

What You Save

Time, money and headaches

What You Achieve

Less risks, maximized ROI, boosted productivity, and peace of mind

XTIVIA

Xtivia's team of Data Warehouse specialists have helped clients of all sizes that were faced with finding qualified resources in the areas of data warehouse administration, management, performance tuning, development and maintenance services. Xtivia, an industry leader, has been successfully providing data warehouse consulting services to clients of all sizes for several years, both domestically and abroad.

Program Benefits

Industry Leading Technology (SQL Server) & Services (Xtivia)

By using the BI & DW JumpStart with SQL Server program, you can:

- Leverage strengths
- Manage risks
- Launch initiatives to improve business processes
- Develop competencies in embedding BI into core processes
- Manage the process of capturing business value as each and every BI initiative takes place

An Effective Tool that Increases the Value of Business Intelligence

Use the BI & DW JumpStart with SQL Server program to:

- Build a robust, affordable BI solution using reliable and expert services and a proven technology stack. With a modest investment of effort, you can deliver business intelligence in a familiar and easy-to-use format, allowing decision makers access to accurate data they need to make the right calls at the right time.
- Overcome the limitations of traditional business intelligence methods which implement BI solutions without focusing on business processes. The program leverages familiar development tools with a business centric process helping you to drive pervasive adoption of the solution yet manage the infrastructure easily.
