

XTIVIA WORKFLOW FRAMEWORK

OVERVIEW

The XTIVIA Workflow Framework (XWF) is a robust architectural framework for the implementation of workflow based business process automation solutions. XWF is a composite application development environment that provides developers with a rich library of UI and SOA components to quickly prototype, build, test, and implement business process automation solutions.

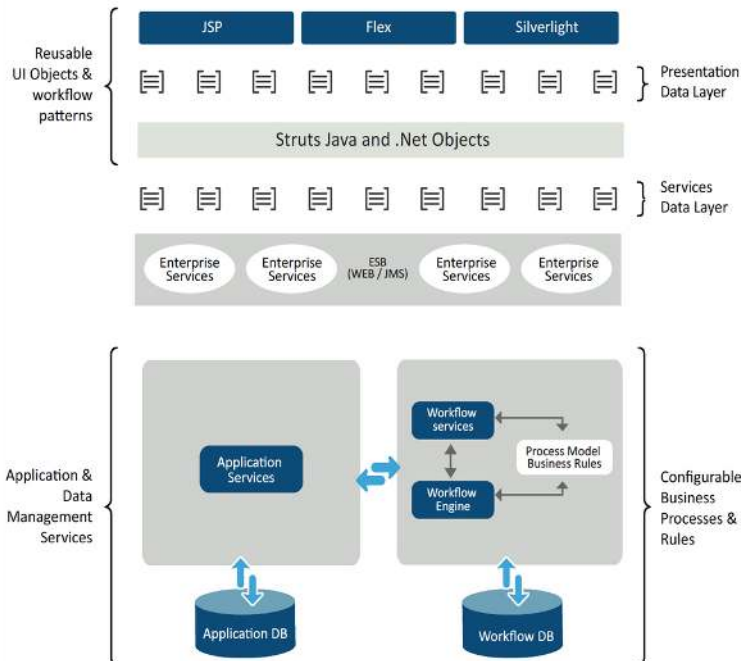

The XWF supports a rich user interface and contains multiple reusable development components that are built on industry leading standards. XWF is ideal for the development and deployment of dynamic workflow based applications leveraging the underlying service-oriented architectural environment. XWF provides business users with a single unified task-driven interface to manage and execute multiple disparate business processes.

The latest version of XWF also includes an upgrade to Tibco AMX BPM, JBoss, JBPM and HTML5.

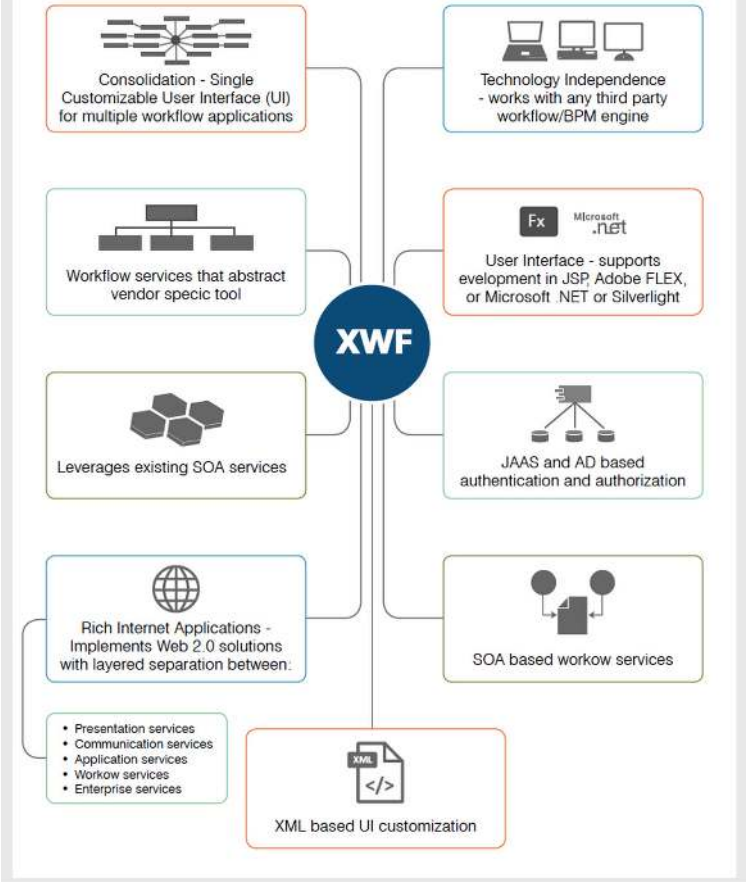

BENEFITS

- Develop user friendly and rich UI based solutions
